R_X11-Flush
Line Set Flushing Tool

Nu-Calgon

This tool was developed specifically for flushing line sets with Rx11-flush.

As seen in the photo the tool has a rubber cone to allow the tool to be inserted into the 7/8″ line to flush the tubing on the large line set.

It also has a 1/4″ copper tube that allows the tool to be inserted inside the 3/8″ line. One tool for both line sizes.

This is used in conjunction with a charging hose and injection tool.
