

KEEPS YOUR ICE MACHINE CLEAN!

- Dramatically reduces ice machine maintenance and cleaning
- Treatment will last up to 3 months under normal conditions
- All ingredients meet FDA guidelines.
- One step installation - simply place in ice machine water sump after cleaning. No activation or flushing is required.
- Enhances quality of ice
- Reduces maintenance costs

Description

Ice Guard Plus contains advanced technology to dramatically reduce ice machine maintenance and cleaning. This technology utilizes the known properties of silver and copper, incorporated into a drop-in device. The device is placed directly into the recirculating water sump, providing treatment of the machine in one easy step.

Application

Bacteria feeds on yeast and occurs naturally in our environment, which contributes to bio slime. In bars bakery, and sandwich shops, it is common to have airborne yeast along with naturally occurring fungus, mold spores and bacteria. Once it enters an unprotected ice machine, it can begin to develop into a slime growth, and this is one of the major reasons restaurants are fined and ultimately closed. It presents a serious risk to the business establishment, health of the customers and quality of the beverages. Slime growths can reduce the quality of the ice (bad tastes and odors) as well as the size of each harvest. Ultimately, expensive service calls must be confronted and the life of the ice maker itself is shortened.

Ice Guard Plus significantly reduces the down time and high costs associated with service and cleaning.

Directions for Use

Failure to follow these instructions may affect the performance of Ice Guard Plus.

Ice Guard Plus-Pre Installation Instructions

Prior to using Ice Guard Plus, thoroughly clean and sanitize the interior of the ice machine according to the ice machine manufacturer's recommendations. Ice Guard Plus will control growth, but it will not remove existing growth from the machine. Note that when Ice Guard Plus is installed, any slime that is left inside the machine could dry out and flake off into the ice. Remove Ice Guard Plus from the sump prior to using any type of sanitizing or cleaning products. Prior to use store in a cool, dry environment.

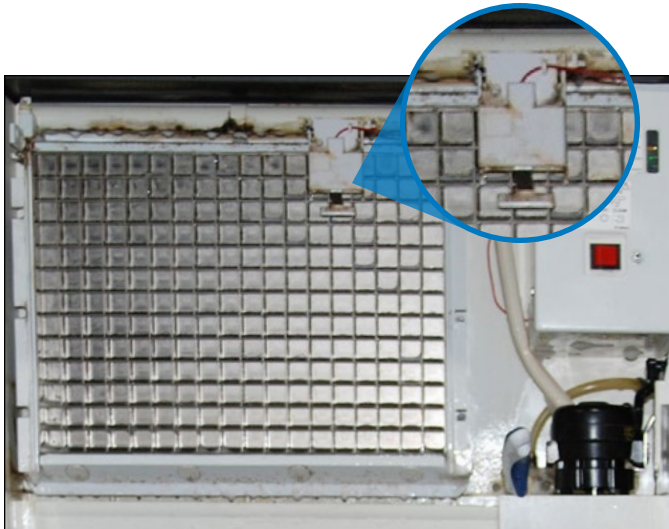

Ice Guard Plus Installation & Service Life

Remove the Ice Guard Plus from the box then remove the internal packaging. Simply place Ice Guard Plus directly into the sump of the ice machine. Use the enclosed plastic tie to secure the Ice Guard Plus to a fixed object. In cases where the stick is not entirely submerged in the sump water, the water will still wick up the stick and provide treatment. Treatment will last up to 3 months under normal operating conditions.

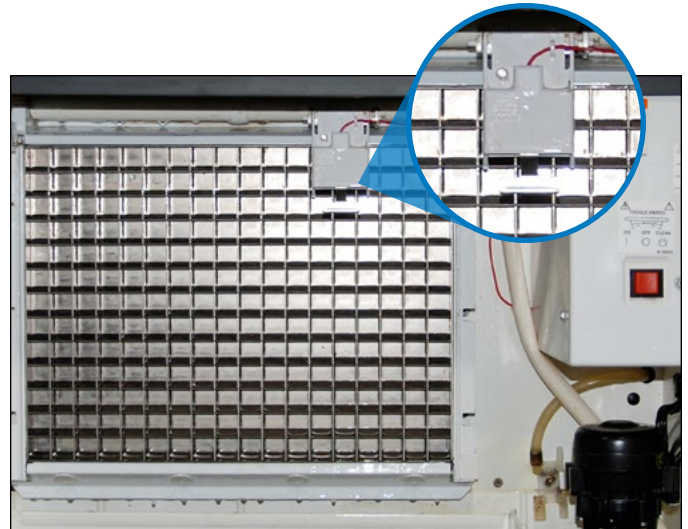

Disclaimer

Use Ice Guard Plus only as instructed. Thoroughly clean and disinfect the ice machine according to the ice machine manufacturer's instructions prior to installing. Also, remove Ice Guard Plus prior to using any type of sanitizing or cleaning agent. Do not attempt to open the Ice Guard Plus cylinder. Do not ingest product inside the Ice Guard Plus. In case of ingestion, contact your physician.

Read and understand the product's label and Safety Data Sheet (SDS) for precautionary and first aid information. The SDS is available on the Nu-Calgon website at www.nucalgon.com.
